

# Your EHR training program is mission-critical. Your delivery should be too.

**HIPAA-certified for clinical training, Class gives health systems the infrastructure to deliver, verify, and document EHR competency at scale.**

The consequences of inadequate EHR training aren't abstract. They show up in clinical errors, failed audits, and staff who weren't ready to use the system they rely on to do their jobs. Class is a virtual classroom for Zoom and Microsoft Teams that gives EHR training teams the tools to run every session consistently, keep clinical staff genuinely engaged, and produce records that hold up when it counts.

### Prove Competency

Attendance records tell you who showed up. Class captures real-time engagement scores, assessment outcomes, and session transcripts for every training, giving your team a complete record of what happened and what clinical staff took away from it.

### Standardize and Scale

Inconsistent delivery across instructors, departments, and sites puts program quality at risk. Session templates, pre-configured breakout rooms, and LMS syncing mean every cohort gets the same repeatable program.

### Run Leaner

Manual roster management, session setup, and post-session reporting take hours that stretched EHR training teams don't have. Class automates the administrative work so your team spends more time on instruction and less on logistics.

## How Does Class Compare?

	Class	Zoom	Teams
Purpose-built for instructor-led training	✓	✗	✗
Session templates and persistent setup	✓	✗	✗
Real-time learner engagement scoring	✓	✗	✗
Breakout room monitoring and oversight	✓	✗	✗
Automated attendance + LMS sync	✓	✗	✗
Audit-ready session records	✓	✗	✗
HIPAA-certified and SOC 2 Type II compliant	✓	✓	✓

# The Cost of Doing Nothing

General-purpose meeting tools weren't designed for instructor-led clinical training. The cost of that choice—in compliance exposure, administrative overhead, and training programs that can't scale—becomes evident across every live session, cohort, and audit.

75%

reduction in nurse training time achieved by health systems using virtual EHR training programs\*

76%

faster content development achieved by health systems using virtual EHR training platforms compared to industry average\*

50%

reduction in physician training time achieved by health systems using virtual EHR training programs\*

\* KLAS Research Arch Collaborative, 2025

# What Changes With Class

## BEFORE THE TRAINING SESSION

LMS integrations and session templates mean rosters are synced, breakout rooms are pre-configured, and materials are loaded before the first learner joins.

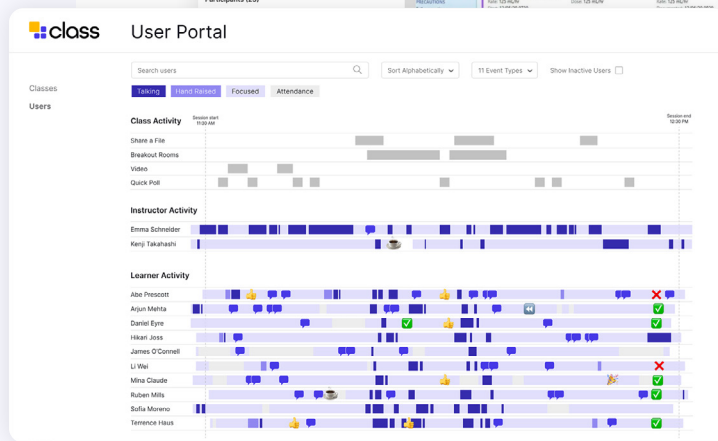

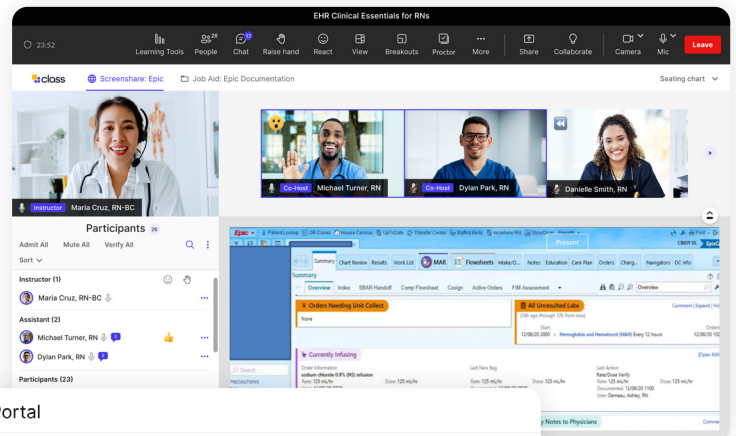

## DURING THE SESSION

Instructors get a real-time engagement score for every learner and a bird's-eye view into every breakout room, so they can identify which clinical staff need support and act on it when it matters most.

## AFTER THE SESSION

Attendance, learner progress, and assessment outcomes sync directly to your LMS. Timestamped session records, transcripts, and chat logs are ready when your compliance team needs them.
